

# Deployment UML diagram

## Exercise

In the system of settlement of water used by water supply company "Healthy Water" infrastructure is as follows. Workstations (in the number 15) are connected to the server (Xeon 3400, 8GB RAM) through a local area network (Ethernet), while the readings of counters are transferred from portable computers (50 units) using GSM modems. On the server the following components are resided: BillingDB providing interfaces IReading and IPayment and module (library) ConsumptionSettlement using IPayment. On 5 workstations an application Settlements using both interfaces of BillingDB is installed, on the remaining workstations CostsSettlement using interface IPayment is installed. Installed on portable computers the program Readings uses interface IReading. Provide a deployment diagram implementing the above scheme.

## Proposition of solution

Visual Paradigm for UML Community Edition [not for commercial use]
